ULTRA-SMOOTHIE-S/PDIF-DIGITAL-INPUT-DAC PURE WOLFSON DIGITAL SOUND!

This is a S/PDIF Digital Input DAC.
Which means it accepts a digital input from a S/PDIF source.

Most modern CD players, DVD players, and other audio and video equipment have S/PDIF outputs and can be used with this DAC.

This DAC can drive headphones from 16 to 300 Ohms and puts out a 1.7 V RMS Audio Signal.

It can also be used to drive powered speakers, stereo systems with AUX or CD inputs, and pretty much any other device with AUX or CD inputs.

It uses a regular wall plug in AC adapter and can use any adapter that has an output of 9 to 12 Volts AC or DC.

The “ERROR LED” comes on when there is any error in the data received by the S/PDIF Input.

TO USE:

1. JUST PLUG IN THE POWER ADAPTER TO THE ULTRA-SMOOTHIE
2. PLUG IN THE S/PDIF INPUT SOURCE TO THE ULTRA-SMOOTHIE
3. PLUG IN YOUR HEADPHONES OR INTO YOUR STEREO SYSTEM
